

Day 7: Live Deployment & Post-Launch Strategy

– [General-e-commerce Web]

Name: Mahnoor Ansari

Production Deployment

1.Environment Setup:

- Deploy a **user-friendly and responsive** e-commerce website.
- Ensure **secure payment gateways** and **SSL encryption** for safe transactions.
- Optimize **server performance and website speed** for a smooth shopping experience.
- Implement **SEO and analytics** to track user behavior and improve visibility.

2. Codebase Management:

- Maintain a **clean and scalable** codebase for future updates.
- Use **Git & CI/CD pipelines** for smooth deployments and rollback options.
- Follow **best practices** for security, error handling, and database optimization.
- Regularly update the system to fix bugs and enhance performance.

3. Penetration Testing and Security

- Conduct **penetration testing** to identify vulnerabilities.
- Implement **SSL encryption** to secure user data and transactions.
- Ensure **compliance with GDPR and data privacy laws** to protect customer information.
- Enable **real-time monitoring and logging** for security threats.
- Keep **software, plugins, and dependencies** up to date.

Branding and Marketing:

We will create a **professional brand identity** with a unique **logo and strong social media presence**. Our marketing strategy includes **paid ads, SEO, email campaigns, and influencer collaborations** to reach more customers. Additionally, we will launch **promotions and referral programs** to boost engagement and sales.

Investor Partnerships:

We will connect with **potential investors** by showcasing our marketplace's **growth potential, technology, and scalability**. Clear **partnership agreements** will define **roles, equity sharing, and responsibilities**. Contracts will align with our **long-term goals**, outlining **financial expectations, timelines, and key deliverables**, with legal guidance if needed.

Inventory and Resource Management:

We will use **demand forecasts** to manage inventory effectively, ensuring the right stock levels with **investor support**. **Automated tracking** will improve efficiency, while resources will be allocated smartly to optimize operations.
